Although I do not have much experience still in the Computer Science field, I am willing to learn. I have most experience so far in Python, however now that I am learning Java, I hope to aquire more skills in another well-known programming language. I have managed to keep up in past classes and refuse to fall behind. No matter the obstacle, my goal is to have these programming langugaes down so that I can succeed in this field.

Organizational Skills

Professional Experience

- Student
  Lewis University | August 2021 - Present

  · I have taken a decent amount of classes towards my major in Computer Science.
  · Classes taken: Applied Calculus, Introduction to Computer Science, Discrete Mathematics, Programming Fundamentals
  · Current classes: Applied Probability and Statistics, Object Oriented Programming, Introduction to Networks
  · My GPA has been kept at a 3.8 based off my freshman year.

Education

- High School Diploma
  Lockport Township High School at Lockport August 2017 - May 2021

  In high school I was always engaged in class. I managed to keep my GPA at a 3.8 throughout all four years. I took an AP Computer Science class my freshman year, where we made our own apps. I developed an app that allowed you to learn the basics of the Polish langugae. A mini Duolingo.

  I tried to involve myself in as many extracurricular activities as I could such as tennis and badminton. I was able to make it down to state playing badminton. My junior year, I ended up joining the colorguard and performing with the marching band, which then pushed me into joining winterguard my senior year. I also was a part of the National Honor Society and French National Honor Society. I was nomintated by teachers to be a part of a Focus Group to talk with the principals and keep in check on how to make everyone at my school feel safe as well.

- (Goal) Bachelor's in Computer Science
  Lewis University at Romeoville August 2021 - Present

  Currently a sophomore in college studying Computer Science. I have taken an Introduction to Computer Science course on HTML and Python, a Programming Fundamentals course on Python, and am currently taking an Object Oriented Programming course on Java.

  Other classes I have been taking are either math classes that are required for my major, or just regular Gen-Eds.
